

NewBuild

- Project duration seven months
- Design by Ulrike Rahe and A-Tec Design
- Numerous eco features

"Phil is a very reliable and thorough builder and he has good people working for him. Whenever I had a request out of the norm, he would try his best to find a solution or come up with an alternative. The house is just as I wanted it to be and the quality of the build is outstanding"

EcoHouse, St Columb Minor, Newquay

Our project brief was to help our client, Irene Vedder, create a distinctively styled new home with a number of special **ecological features**.

Irene comes from Germany and bright, clean European styling is very evident throughout. In fact much of the design input came from her sister Ulrike who **lives in Sweden**. We built the house in timber frame with an attractive mix of self coloured render and vertical timber weatherboarding finished with a traditional Swedish 'Falunpaint' system.

Insulation in the walls is provided by **condensed newspaper**, and Irene opted for under-floor heating with a woodburner downstairs (by Wendron Stoves) for those cold winter evenings in.

Project with significant eco features
